

CHARACTERISTICS

- Direct access via web tools allow a view of the entire system's condition (equipment, components, operational data)
- Event notification possible (SMS, email)
- Remote technical support
- Optimised maintenance programs thanks to a reduction in the number of 1st level interventions
- Evolves in parallel with the machine up-grades
- Non intrusive monitoring system
- High definition visualisation on a computer, smartphone or tablet
- No additional infrastructure required

IN BRIEF

Designed to optimise maintenance operations and ensure maximum reactivity, easy-View is a SOLYSTIC™ web monitoring tool. Using a web navigator, smartphone or tablet computer, it enables remote access to all the information that is required for the maintenance of equipment. Easy-View is part of the *easy* suite of products accessible via the SOLYSTIC Internet portal.

BENEFITS

- Remote supervision of equipment in real time for faster fault diagnosis, repair
- Added value for maintenance and technical support, accompanied by a significant cost reduction
- Improves ability to monitor especially where platforms are distributed across the country
- A clearly defined and complete view of the machine components
- Quick, simple to incorporate in all types of infrastructure
- Reduces the number of on-site visits
- Remote identification of any spare parts that may be required for on-site visits
- Open interface makes it easier to carry out new developments and up-grades
- Easy consultation through standard tools: web navigator, smartphone and tablet.
